24/7 RAIL WORKS

BETWEEN CROMWELL ROAD, SOUTH YARRA AND ORRONG ROAD, TOORAK

WEDNESDAY 1 TO FRIDAY 31 JANUARY 2020

During January, major infrastructure upgrades continue for the Metro Tunnel as we prepare our network for bigger, better trains and deliver improvements for passengers across Victoria. These upgrades include 24/7 works in the rail corridor between South Yarra and Malvern stations. Works will involve extending platforms at Hawksburn station and installing additional infrastructure throughout the rail corridor.

This notification provides an overview of works that will be taking place near you during this time.

**Snapshot of upcoming 24/7 works**
- Hawksburn station platform extension
- Installation of cables and retaining walls
- Overhead structure installations and wiring upgrades
- Temporary site set up
- Traffic impacts
- Vegetation removal.

Further information on these works can be found overleaf or at [metrotunnel.vic.gov.au](http://metrotunnel.vic.gov.au)

**When are we working?**

**Normal construction hours**
- 7am to 6pm, Monday to Friday
- 7am to 1pm, Saturdays
- Some activities may be required to continue slightly past these hours. All efforts will be made to complete activities as scheduled.

**Out of hours**
- Some works are required to take place out of normal construction hours. The timing of these works are outlined in the construction information overleaf.

**24 hours**
- 24 hour works are sometimes required during peak construction activities. The timing of these works are outlined in the construction information overleaf.

**WORKS IN YOUR AREA**

**Hawksburn station platform extension**
**Hawksburn station**
**Wednesday 1 to Friday 31 January**
- In preparation for the new longer High Capacity Metro Trains that will run through the Metro Tunnel, we will be undertaking works to extend some of the platforms at Hawksburn station.
- Non-destructive digging (NDD) will be required prior to starting trenching and excavation works to safely expose any existing assets in the area.
- Once we complete the NDD, we will trench through the station platform and install steel framework that will create the base structure of the platform extension.
- Concrete will be poured over the steel framework to secure the extension in place. Asphalt will then be spread over the concrete to create a smooth surface for station users.
- These works will require the use of an NDD truck, excavators, dump trucks and hand tools.
- Works are expected to generate medium level noise, with periods of high level noise while we complete excavation works. Where possible, we will complete high impact works during the day.

**Overhead structure installations and wiring upgrades**
**Rail corridor between Cromwell Road, South Yarra and Orrong Road, Toorak**
**Wednesday 1 to Friday 31 January**
- Upgrades to overhead structures are required within the rail corridor to support the new rail lines.
- Precast concrete supports will be installed into the ground and the overhead structures will then be secured into place on top of the supports.
- Once the overhead structures are in place, new wires that will supply power to the trains, will be threaded through the structures.
- These works will require the use of a crane, drilling equipment, an elevated work platform and hand tools.
- Works are expected to generate low to medium levels of noise.

**Temporary site shed**
**Luxton Road, South Yarra**
**Monday 30 December 2019 to Friday 31 January 2020**
- While we complete works throughout January, a temporary site shed will be setup next to Hawksburn station on Luxton Road to provide essential worker amenities.
- The site shed will operate off a generator and will be accessible to staff 24/7.
- Some parking will be temporarily removed to accommodate the site shed.
- The site shed will have directional lighting in place for worker safety. These lights will be directed away from residential properties where possible.
- There will be low level noise associated with the site shed.

**Transport changes**
- Buses will be replacing trains along the Frankston, Cranbourne, Pakenham and Sandringham lines at various times throughout January. Visit www.ptv.vic.gov.au for more information.

**Vegetation removal**
**Hawksburn station**
**Wednesday 1 to Friday 31 January**
- To allow for the installation of the retaining walls along the rail corridor, some vegetation will need to be removed.
- A qualified arborist will review the site and provide advice to our work crews. The arborist will be on site to oversee any removal of vegetation.
- These works are expected to generate high levels of noise and have been scheduled to take place during the day.
- Works will require the use of shears and chainsaws.

---

**Installation of cables and retaining walls**
**Rail corridor between Cromwell Road, South Yarra and Orrong Road, Toorak**
**Wednesday 1 to Friday 31 January**
- To provide power to the new train lines, power and communication cables need to be installed along the length of the rail corridor.
- The cable conduit will either be buried underground or housed within steel piping. The steel piping will be attached to existing infrastructure within the rail corridor or to new retaining walls that will be specifically built during the January works.
- To install the cable underground, work will take place to excavate pits within the corridor and cable conduit will be placed in the pit and covered over with crushed rock. Where cable needs to be attached to a wall, the steel piping will be drilled into place.
- The new retaining walls will sit at approximately two metres in height and will be installed within the rail corridor by excavating into the ground and installing a concrete support to hold the precast concrete panels safely in place.
- These works will require the use of a crane, excavators, concrete pumps and hand tools.
- Works are expected to generate medium level noise, with high level noise while we install the retaining walls. Each retaining wall is expected to take up to five days to install, after which noise levels are expected to decrease.
