Further to the February construction update distributed this month, we wish to advise of upcoming out of hours works in your area.

Works will take place to install communications and power services in the rail corridor near West Footscray and Middle Footscray stations. For the safety of workers and rail users, these works can only take place when trains are not running.

**What we are doing**

- Non-destructive digging to investigate ground conditions and confirm the area is free of underground services
- Excavating and installing new communications and power services
- Removing excess material to a site compound at Ashley Street, Braybrook.

**When**

- 24 hours from 4pm Saturday 14 March to 4pm Sunday 15 March 2020.

**What to be aware of**

- These works are expected to cause medium levels of noise and vibration, with periods of high noise if rock breaking activities occur
- Ground conditions in the local area contain basalt rock which, if encountered, may need to be broken out using jackhammers to facilitate these works. Should the project team encounter rock during the night we will endeavour to program working with this material during the day if possible
- Construction vehicles will access the rail corridor via Raleigh Street
- Lighting towers powered by generators are required during nightworks. They will be positioned to face away from residential properties.
