

KEEPING MELBOURNE MOVING

Building the massive nine kilometre twin rail tunnels and five new underground stations for the Metro Tunnel will cause some unavoidable disruption to the transport network for several years. We will help you plan your journey to minimise inconvenience.

Temporary but extended changes to travel routes into and around the city mean that people will need to consider changes to their transport routines to avoid and minimise delays.

The Metro Tunnel's work sites and future stations are located in the inner city where the transport network is at its busiest. This includes arterial roads, the metropolitan rail network, the city's busiest tram corridor, high frequency bus services and popular cycling routes.

Some temporary but extended changes to the road network are needed from 2017 to enable us to build this city-shaping project safely. This includes road closures at various times at Franklin Street, A'Beckett Street, Flinders Street, Domain Road and Grattan Street.

From mid-July 2017, Toorak Road West will be reduced to one lane in each direction from St Kilda Road to Park Street, South Yarra, to facilitate the Route 58 tram diversion. From early 2018, St Kilda Road will also be temporarily reconfigured to one traffic lane in each direction between Dorcas Street and Toorak Road West with tram, pedestrian and bicycle access maintained as we build a new underground station in the roadway.

Other short term road closures will be required over the life of the project.

Building the Metro Tunnel could mean changes to your journey each day but will result in decades of benefits for Victoria's liveability and prosperity.

Helping you plan your journey

Working together to understand the impact of these changes on your journey is key to keeping you and Melbourne moving while the Metro Tunnel is built.

Options may include people changing:

- their regular transport mode
- the route they normally take into and around the city
- the time they start and finish work.

The Melbourne Metro Rail Authority (MMRA) has a team of transport advisors to help organisations keep operating while major construction is underway.

Travel support will include:

- Targeted workshops to discuss how road and transport network changes may affect staff, visitors, students and deliveries, and provide travel planning advice to help manage impacts.
- Drop-in sessions to inform organisations of transport network changes and discuss how MMRA can provide support with individual journey planning.
- For organisations with more than 500 employees, MMRA will work to provide tailored travel planning guidance to best suit organisational and employee needs throughout the Metro Tunnel's construction phase.

The right tools

MMRA will provide relevant resources and assistance to help organisations understand their travel options during the delivery of this transformational public transport project.

Specialist transport advisors will help organisations prepare to manage upcoming changes. They will:

- provide up to date information about changes to transport networks due to Metro Tunnel construction works
- undertake staff and/or student travel surveys to help inform tailored travel advice
- develop Travel Action Plans for organisations that offer ways to mitigate impacts
- identify ways to help staff, visitors, students, tradespeople and delivery drivers plan their journeys.
