

WORKS NOTIFICATION

TBM BREAKTHROUGH AND RETRIEVAL MARCH - APRIL 2020

The project's first tunnel boring machine (TBM) has now completed tunnelling from the site of the new Arden Station towards Kensington.

The project's second TBM, Meg, is expected to arrive at the TBM retrieval shaft adjacent to South Kensington station during March.

Once each TBM 'breaks through' into the retrieval shaft, the front shield components will be disassembled, lifted out of the shaft and returned to the new Arden Station site via road transport. The rear (gantry) sections will be transported back via the constructed tunnel. This notification provides information about TBM breakthrough, retrieval and transport.

What we are doing

- Delivering oversized equipment, including large cranes, to and from site during the day and at night, subject to permit conditions
- Before the TBM's cutterhead 'breaks through' into the retrieval shaft, the shaft will be filled with water to balance groundwater levels while the TBM constructs the final section of tunnel. The water will then be drained and the TBM retrieved. Water will be pumped back to the water treatment plant at the new Arden Station site via the TBM
- The TBM cutterhead and front shield sections will be cleaned and disassembled using high pressure cleaners and hand tools before being removed from the retrieval shaft and loaded onto trucks using a crane. The rear (gantry) sections of the TBM will travel back to the new Arden Station site through the constructed tunnel. Each TBM is expected to take approximately four weeks to retrieve

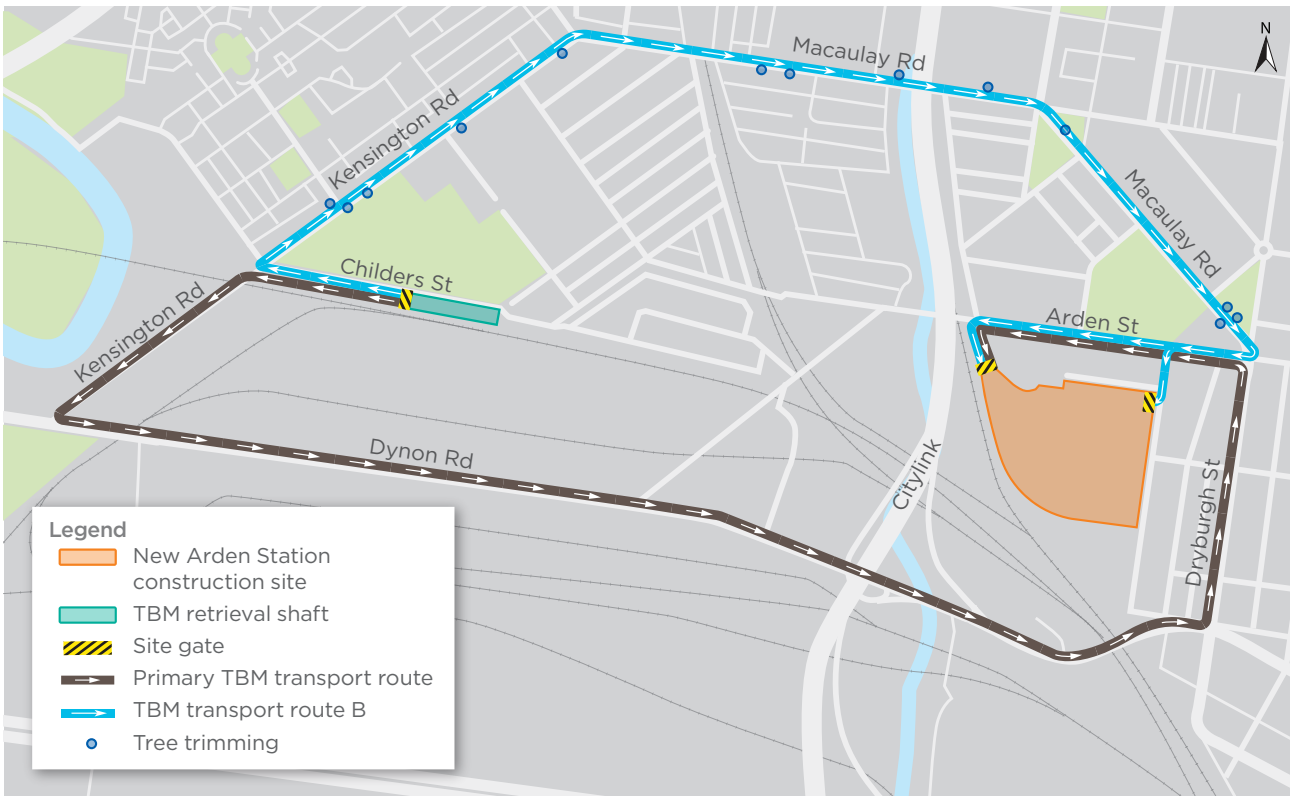

- Some trees along TBM transport route B (see map overleaf) require minor trimming to facilitate the transportation of oversized TBM parts. There may be short-term impacts to footpaths, parking spaces and roads adjacent to trimming works.

What to expect

- TBM retrieval activities are expected to generate medium levels of noise
- Oversized TBM parts will be transported at night, subject to permits. These loads will be transported back to the new Arden Station site via Kensington Road, Dynon Road, Dryburgh Street and Arden Street. Some loads, which are unable to fit beneath bridges on this route, will travel via Kensington Road, Macaulay Road and Arden Street (see map overleaf). Some tree trimming on Kensington Road will be required
- Loaded trucks may be staged on Childers Street prior to being transported from site at night.

When

- 24 hours, from mid-February until April 2020
- Out of hours works are required to facilitate the delivery of oversized equipment and transportation of TBM parts
- Some tree trimming may be completed outside of regular construction hours to minimise traffic impacts during peak periods.

Indicative only
